

## Telephone Handset Transmitter UHF – HANDSETTX

### FEATURES

- § Designed for digital business telephone systems
- § Listen or record both sides of all telephone conversations
- § Can be fitted inside telephone itself

Designed for use in modern digital or multi line business systems where an analogue telephone transmitter will not function, this transmitter enables one particular handset to be monitored. The device is installed inside the telephone handset itself so, whichever line the user activates, every call they make will be monitored. A lithium battery powers the transmitter for an operating time of up to 8 weeks. Calls can be monitored and recorded in exactly the same way as the above version.

\* For export outside the EC only

### TECHNICAL SPECIFICATIONS

Typical Performance Characteristics - at 20 degrees C

<b>Dimensions:</b>	50mm x 25mm x 8 mm
<b>Battery:</b>	3V Lithium CR2430
<b>Battery Life:</b>	up to 8 weeks
<b>Transmission Power:</b>	10mW
<b>Frequency control:</b>	Independent quartz crystal
<b>Frequency accuracy:</b>	Better than 0.0005% or receive frequency
<b>Modulation:</b>	Narrow Band FM 3 KHz bandwidth
<b>Frequency Range:</b>	350 to 600 MHz preset with crystal
<b>Spurious emissions:</b>	Better than -50dB of transmission frequency
<b>Operating Temperature:</b>	-10 to +60 C
